

Renovate infrastructure for new relationships

Strategy Note 273 said we need to renovate infrastructure to make it suit our exchange-free economy.

A few examples:

- Clean up and repurpose banks, military bases, prisons, coal mines, insurance call centers, fastfood joints, etc.
- Breastfeeding rooms and break rooms in all workplaces.
- Internet access everywhere people want it.
- Remove and recycle cash registers, checkout counters, theft barriers.
- Fewer cars, highways, jets, and jetports. More bikes, trains, dirigibles, and dirigible fields.
- Serious energy conservation. Insulate buildings.
- Less packaging, more bulk bins.
- More communal living spaces.
- Excellent libraries everywhere open all the time.
- Many more meeting/discussion rooms.
- Much less distinction/distance between living places, working places, and learning places.
- Distributed electrical generation/storage/distribution mini-grids.
- Instead of building yachts and mansions for a few, we build good homes for everybody.
- Rip up the pavement we won't need.
- Every neighborhood has a distribution hub, health clinic, library, all-ages learning center, community garden, community pantry/kitchen, dining/meeting/dance/performance hall, workshop, repair/recycling center, hostel for travelers, childcare/eldercare center, and whatever else we want to create for ourselves.

Use designs tailored to local conditions and local preferences. Every place will have its own distinct character.
